PET/CT QC/QA

Computed Tomography [] Is a medical imaging procedure of creating a cross-sectional tomographic plane of any part of the body. [] CT scanners create cross-sectional images of high radiographic contrast [] The dose to the patient may be significantly higher than with alternative imaging modalities 3.

Quality Assurance Programme in Computed Tomography

A rigorous and ongoing quality assurance (QA) program for dual-modality positron emission tomography/computed tomography (PET/CT) systems is recommended to include an initial evaluation of scanner performance to establish a baseline of measurements and then periodic assessment of system performance of the scanners on an annual, semi-annual, quarterly, weekly, and daily basis.

PET/CT Acceptance Testing and Quality Assurance

The CT Accreditation Program involves submission of clinical and phantom images, dose measurements and scanning protocols. Accreditation is required for providers that bill for CT under part B of the Medicare Physician Fee Schedule.

ACR CT Accreditation

The purpose of the ACR QC manual is to help guide facilities in establishing and maintaining an effective CT quality control program and to provide a reasonably uniform approach to testing. The manual provides a minimum set of tests required to ensure that a scanner performs in a consistent manner and yields acceptable images.
