Scientists Are Rethinking the Very Nature of Space and Time

Absolute space, in its own nature, without relation to anything external, remains always similar and immovable. Absolute, true, and mathematical time, is itself, and from its own nature, flows equably without relation to anything external. This concept of time seems natural enough. We all accept it almost unthinkingly.

Philosophy of space and time is the branch of philosophy concerned with the issues surrounding the ontology, epistemology, and character of space and time. While such ideas have been central to philosophy from its inception, the philosophy of space and time was both an inspiration for and a central aspect of early analytic philosophy. The subject focuses on a number of basic issues, including whether time and space exist independently of the mind, whether they exist independently of one ...

The Nature of Space and Time is based on a Hawking-Penrose debate that took place in the spring of 1994; the "debate" really consists of alternating lectures (three by each author) followed by a final joint discussion. In fact, the lectures reveal that there is much that Hawking and Penrose agree on.

especially Oliver Pooley and Harvey Brown. The latter's 'dynamical approach' asserts that the space-time structure of our world is what it is because of the dynamical laws of nature and their symmetries. That is, the dynamical laws are (at least, relative to space-time) fundamental, and space-time structure is derivative.
